KIT High Range IQ Test

The high range IQ test is a test designed to measure human high cognitive abilities. The standard IQ test such as Stanford–Binet and Wechsler can measure IQ up to 160 SD15, but there is no limit to the measurement range of the high range IQ test. Standard IQ tests are designed to determine intellectual

disability, whereas high range IQ tests are developed to recognize high intelligence.

Considering that the potential of human cognitive ability has no limits, it is possible to estimate how useful the high range IQ test can be in evaluating human intellectual abilities. Of course, there are methodological limitations in measuring human intelligence or IQ. One day, the era may come when the human brain can be scanned with an MRI to measure human intelligence. Even though, there are clearly human cognitive abilities that can be measured through high range IQ tests. The high level of human reasoning abilites will not be measurable with MRI.

Many people think that standard IQ tests are created by psychological experts trained in academia, while high range IQ tests are designed by non-experts. This is not true. The high range IQ test is also significant for the background of the person who makes the test. For example, the **KIT High Range IQ Test** was created by YoungHoon Kim, who scored perfect on standard IQ tests and various high range IQ tests. If a person with such a background makes a high range IQ test, it has advantages different from standard IQ tests because the test can be made based on the empirical understanding of high range intelligence.

■ GIGA Society™

As an experimental high-range IQ project, GIGA Society™ is an extremely high IQ society for the certified highest IQ people who scored at or above IQ 190 (SD 15) on an acceptable high-range IQ test, in partnership with World Mind Sports Council & World Memory Championships founded by Tony Buzan, the inventor of Mind Maps. GIGA Society™ was founded by The Brain Trust registered in 1989 as a nonprofit organization in the United Kingdom.

The official GIGA Society™ is distinct from other giga-level societies in that it accepts scores from a variety of high-range IQ tests which have been developed by test authors from around the world. Warning: there is another giga-level group which accepts unprofessional uncensored tests authored by this kind of group's founder who is not properly disciplined academically. This is an extremely biased policy. To combat this questionable practice, the official GIGA Society accepts the world's best high-range tests for admission consideration.

The official GIGA Society™ has a total of **nine members** worldwide, including individuals from Asia, Europe, and America. Their diverse professional backgrounds include MIT graduates and university professors. GIGA Society welcomes geniuses from all over the world.

The President of GIGA Society™ is Dr. Tom Chittenden who is an Honorary Professor in the Department of Artificial Intelligence at the University of London.

. . .

■ Warning: Here is the official GIGA Society™ for those who score IQ 190 (SD 15) on an acceptable high range IQ test. However, there is another giga-level group which accepts unprofessional uncensored tests authored by the group's founder who is not properly disciplined academically.

■ Disclaimer: IQ Olympiad Foundation Ltd is a cryptocurrency company by share, founded by Dr. Ronald Hoflin, the founder of Mega Society, together with a South Korean Jeong Kye-won(정계원) called Andrew Zheng or Andrew Jeong. The legal founder and CEO of IQ Olympiad Foundation Ltd is Jeong Kye-won(정계원). No GIGA Society is affiliated with the IQ Olympiad and Mega Society.
